DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose nor sufficiently suggest the method for visually transmitting auxiliary data from a monitor of a computer system to a hand held device as claimed in claim 26 where a calculation is preformed on the computer system to determine how to broadcast auxiliary data based on a horizontal frequency of the monitor, transmitting the data in order to provide promotional opportunities to the user of the hand held device based on the processing of the received auxiliary data.

The prior art of record does not disclose no sufficiently suggest the card of claim 31 used for the redemption of promotional opportunities which include light detection hardware electronically connected to the microprocessor and comprising optical filters, a load resistor, a microprocessor trigger and a photo transistor. In particular, the term card, as defined by the applicant is being a device, which may be held in the palm, or between the fingers of the user or easily grasped and manually handled by the user including credit card like devices.

Nemirofsky discloses television activated interactive smart card system used for the redemption of promotional opportunities including money, discounts, value, UPC codes etc. (see col 11 lines 23 - 48).

Nemirofsky discloses the smart card comprises a microprocessor 20 (see fig 5) embedded in the card, a random access memory 30 and programmable memory 26

Art Unit: 2623

electronically connected to the microprocessor 20, and liquid crystal display 42 electronically connected to microprocessor 20 and random access memory 30 and programmable memory 26.

Nemirofsky further discloses a photodetector / scan detector being electrically coupled to microprocessor 20 and memory 36 and 30 (see fig 5), the photo detector is capable of detecting light form a conventional bar code scanner (see col 8 lines 57 - 60, col 9 lines 30 - 33, col 11 lines 23 - 52).

Nemirofsky further discloses a laser detection hardware for detecting the laser light in photodetector 150 means met by the photo detector / scan detector 150 which electronically connected to the microprocessor 20 (see col 14 lines 50 - 55, col 7 lines 58 - 61, fig 5).

However Nemirofsky fails to disclose the light detection hardware in the arrangement as claimed by applicant.

The prior art of record does not disclose nor sufficiently suggest the method of claim 73 where a video signal is broadcasted with encoded coupon data to be entered at a point of sale is received on a hand held device, the coupon data is processed and the device is brought to a point of sale system where it is oriented to a bar code reader on the POS system where the coupon data and serial number of the device are transmitted so that the coupon data may be applied to the sale.

Claims 26, 27, 31, 49, 51, 52 and 73-82 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
